1. OVERVIEW

1.1. History of Mineral Exploration in James Bay (Eeyou Istchee)

Mineral exploration in Eeyou Istchee has been the preoccupation (and occupation) of prospectors and mining companies for more than a century. The richness of the territory in terms of precious and base metals and recently in diamonds continues to augment yearly.

Historically, exploration has been mostly for precious and base metals, uranium and iron. Exploration intensity has always been influenced by the economic value of the minerals targeted. The Goldcorp Inc. Roberto mineralized system in the Opinaca Reservoir area (Wemindji-Eastmain section) has evolved as one of the most significant gold discoveries in Québec in recent years. The continuously positive exploration results obtained from this site prompt other companies to claim in the area.

Eeyou Istchee is gaining prominence as one of Canada's most important areas for mineral exploration. The Opinaca Reservoir has potential for being a major gold mining camp. The Otish Mountains area is very promising for possible diamond, uranium and molybdenum exploitation.

These diamond, gold and uranium discoveries especially, as well as results of other exploration work, place Eeyou Istchee at the forefront of mineral exploration and eventual exploitation in northern Quebec.

1.2. Geology of the James Bay Area

The James Bay region overlies four geological subprovinces in the central part of the Superior Province. These subprovinces are, from north to south:

- The La Grande Subprovince
- The Opinaca Subprovince
- The Nemiscau Subprovince
- The Opatoca Subprovince

These subprovinces (on which the communities of Chisasibi, Wemindji, Eastmain, Waskaganish and Nemaska are located) are mostly made up of volcano-plutonic and sedimentary assemblages intruded by granitoids. They are transected by E-W to WNW-ESE- and NE-SW-trending shear zones metamorphosed to (in the centre) the greenschist facies and (near their borders) to the upper amphibolite facies (Hocq, M., 1994).

The La Grande Subprovince is made up primarily of volcano-plutonic rocks and includes the La Grande Volcano-sedimentary Belt (LGVB). The LGVB runs parallel to the Wemindji-Caniapiscau structural corridor. It consists of mafic to felsic volcanic rocks, interstratified with metasediments and oxide-facies or magnetite iron formations and hosts numerous known mineral occurrences. Scattered throughout the area are komatiitic flows and ultramafic intrusions which locally host Ni-Cu±PGE and Cr mineralization.

The Abitibi Subprovince (on which the communities of Ouje-Bougoumou and Waswanipi are located) is among the richest Archean greenstone belts in the world. It contains numerous granitoid intrusions and volcanic and sedimentary belts oriented roughly E-W dated between 2.75 and 2.67 Ga (Doucet *et al*, 2003). Volcanic units consist of ultramafic to mafic, mafic, or mafic to felsic assemblages. The volcanic assemblages are separated by narrow bands of sedimentary rocks generally composed of clastic units. Several E-W to NW-SE oriented major reverse or normal faults, NE-trending sinistral faults and SE-trending dextral faults transect the Abitibi Belt.

The Bienville Subprovince (on which the community of Whapmagoostui is located) is a plutonic assemblage occupying the southern part of the northern Superior province. It is composed mainly of migmatized orthogenesis ranging from tonalitic to granodioritic in composition, with enclaves of supracrustal (iron formation, paragneiss, metavolcanic rock) and plutonic (ultramafic) rocks intruded by synkinematic granodioritic to tonalitic plutons and by late biotite granites (Perreault and Moorehead, 2003). This subprovince also contains volcano-sedimentary belts, such as the Lac Fagnant Belt, metamorphosed to the amphibolite facies (Perreault and Moorehead, 2003).

In the James Bay region, strong positive magnetic anomalies are generally associated with iron formations (Houle, 2003). In these formations, disseminated sulphides may be detected from electromagnetic or induced polarization anomalies. In geochemistry, particularly in humus surveys, the most useful indicator elements for this type of mineralization are gold and arsenic (Houle, 2003). Houle states that fold hinges and transverse or longitudinal deformation zones affecting these iron formations are favourable sites for gold remobilization and local enrichment. Consequently, all iron formations located along the contact between major lithostratigraphic domains (sedimentary-volcanic) remain prime targets for the discovery of high-grade gold deposits.

1.3. Highlights for 2010

Exploration activities in 2010 show exciting finds and significant increases in potential for diamond, gold, uranium, molybdenum and the platinum group elements on Eeyou Istchee. Some exploration projects have progressed in advanced stages of exploration.

DIAMONDS:

- **STORNOWAY DIAMOND CORP.** and **SOQUEM INC.** have begun a Feasibility Study on the **RENARD** diamond project on their joint venture **FOXTROT** property on Mistissini Traplines.

GOLD:

- 5.0 g/t Au on the **BEAUFIELD RESOURCES INC.** **OPINACA** property ON Wemindji Traplines;
- 52 g/t Au and 20.98 g/t Au on the **VIRGINIA MINES INC.** **POSTE LEMOYNE** property on Wemindji Traplines;
- 10.8 g/t Au on the **AZIMUT RESOURCES - EASTMAIN RESOURCES - OPINACA MINES JV** **ELEONORE SOUTH** property on the Eastmain Traplines and on Waskaganish Traplines;
- 3.8 g/t Au on the **SIRIOS RESOURCES INC.** **KUKAMES** property on the Eastmain Traplines;
- Anomalous Au detected along 6 km on the **EASTMAIN RESOURCES INC.** **EASTMAIN MINE** property on Mistissini Traplines;
- 5.2 g/t Au on the **HINTERLAND METALS INC.** **LOCKOUT** property on the Waswanipi Traplines;
- 10.40 g/t Au on the **MURGOR RESOURCES INC.** **FANCAMP** property on Waswanipi Traplines;
- 28.06 g/t Au on the **MURGOR RESOURCES INC.** **NELLIGAN** property on Waswanipi Traplines;
- 10.3 g/t Au, 2.62% Cu, 14 g/t Ag on the **NORTHERN SUPERIOR RESOURCES INC. – MATAMEC EXPLORATION INC.** **WACHIGABAU** property on Waswanipi Traplines;
- 7.94 g/t Au on the **CARTIER RESOURCES INC.** **DOLLIER** property on Ouje-Bougoumou Traplines;
- **COGITORE RESOURCES INC.** intersected 26.7 metres of massive sulphides grading 2.1% copper, 5.2% zinc, 0.3 g/t Au and 24.9 g/t Ag on its **SCOTT LAKE** property on Ouje-Bougoumou Traplines;
- 6.56 g/t Au on the **TAWSHO MINING INC.** **CHEVRIER** property on Ouje-Bougoumou Traplines;
- 30.2 g/t Au on the **ARIANNE RESOURCES INC.** **OPINACA** property on Waskaganish Traplines;

- 22.97 g/t Au on the **VIRGINIA MINES INC.** ANATACAU-WABAMISK property on Waskaganish Traplines;

LITHIUM

- 1.8% Li₂O on the **LITHIUM ONE INC.** JAMES BAY LITHIUM property on Eastmain Traplines;
- 4.4% Li₂O on the **ARIANNE RESOURCES INC.** KOMO property on Waskaganish Traplines;
- 2.15% Li₂O on the **DIOS EXPLORATION INC.** PONTAX-LITHIUM property on Waskaganish Traplines.

PLATINUM GROUP ELEMENTS:

- 1.46 g/t PGE on the **HINTERLAND METALS INC.** PLATEAU/EBAY property on Waswanipi Traplines.

COPPER, SILVER, ZINC, LEAD, NICKEL CHROMIUM and MOLYBDENUM:

- 35.1% Cr₂O₃ on the **PRO OR MINING RESOURCES INC.** MENARIK property on Chisasibi Traplines;
- 8.8 million tonnes at 0.88% Cu indicated resources and 7.8 million tonnes at 0.87% Cu inferred resources on the **SOUTHAMPTON VENTURES INC.** HORDEN LAKE property on Nemaska Traplines and Waskaganish Traplines;
- 40% Cu on the **AZIMUT EXPLORATION INC. – ABITEX RESOURCES INC.** SOUTH BIENVILLE property on Whapmagoostui Traplines;
- 14 g/t Ag, 0.45% Pb on the **DIOS EXPLORATION INC.** HOTISH property on Mistissini Traplines.

IRON:

- Environmental Scoping Study on the **AUGYVA MINING RESOURCES – CANADIAN CENTURY IRON ORE CORP.** joint venture DUNCAN property on Wemindji Traplines.

URANIUM:

- 0.617% U₃O₈ on the **DIOS EXPLORATION INC.** OPINACA NORD property on Wemindji Traplines;
- 0.787% U₃O₈, 0.1% Y, 1.5% Zr, 14 g/t Ag, 0.45% Pb on the **DIOS EXPLORATION INC.** HOTISH property on Mistissini Traplines;
- 0.13% U₃O₈ over 1.65 on the **GOLDEN VALLEY MINES INC. – LEXAM EXPLORATIONS INC.** OTISH URANIUM property on Mistissini Traplines;
- 0.13% U₃O₈ over 11.0m on the **MAJESCOR RESOURCES INC. – STRATECO RESOURCES INC.** LAC MISTASSINI property on Mistissini Traplines;

- **STRATECO RESOURCES INC.** completed an Environmental Impact Study of the MATOUSH uranium property; and increased indicated mineral resources to 436,000 tonnes grading 0.78% U_3O_8 containing 7.46 million pounds U_3O_8 on Mistissini Traplines;
- 0.67% U_3O_8 on the **AZIMUT EXPLORATION INC. – ABITEX RESOURCES INC.** SOUTH BIENVILLE property on Whapmagoostui Traplines;
- $\geq 0.008\%$ U_3O_8 in 45 of 58 drill holes on the **BONAVENTURE ENTERPRISES INC.** K9 URANIUM CORRIDOR property on Whapmagoostui Traplines.

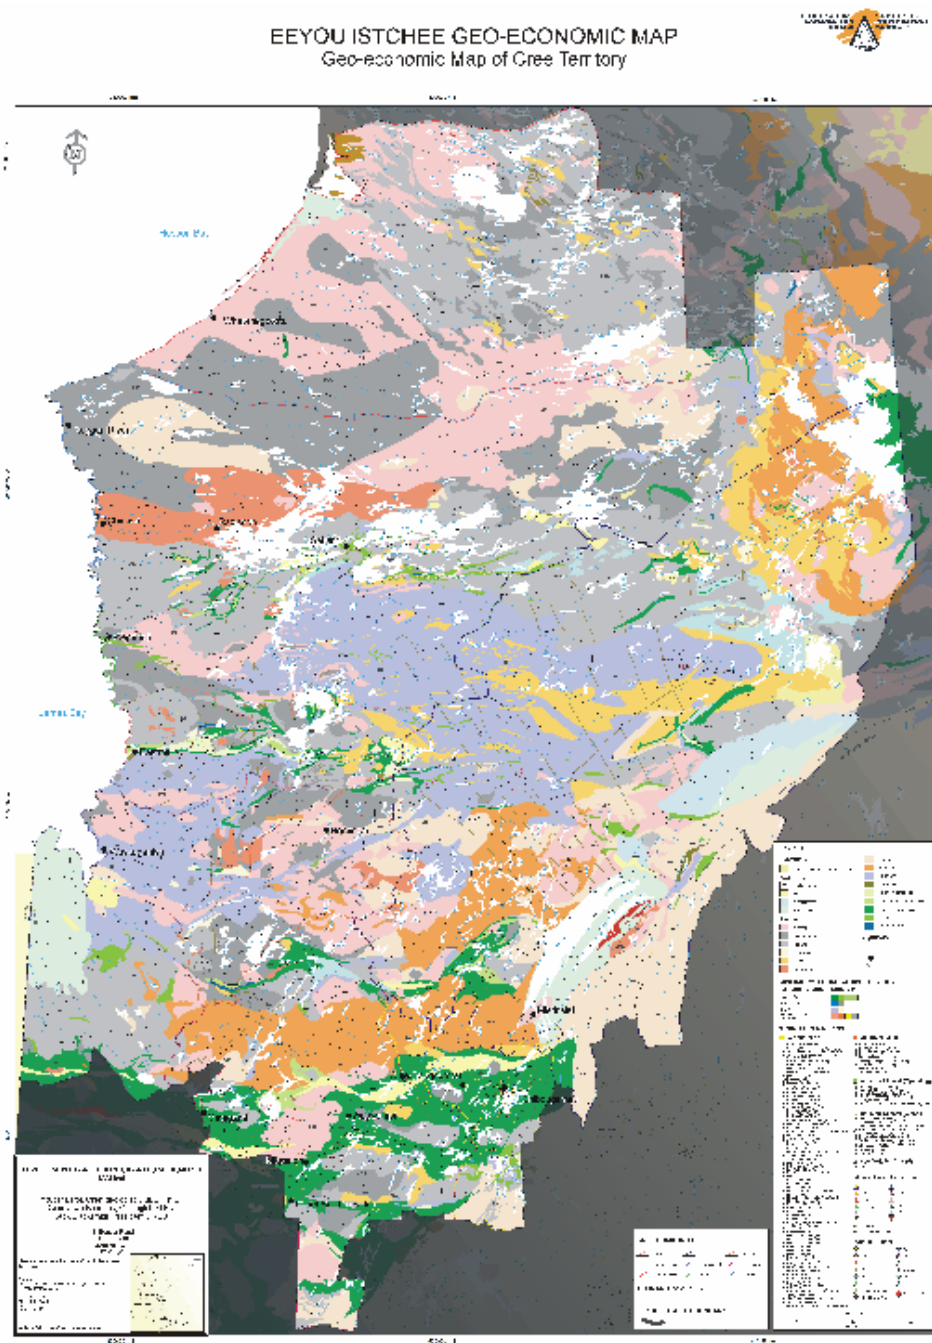

OTHER:

- Sphagnum peat moss on the **TOURBIERE BERGER LTD.** property on Waskaganish Traplines.

MINES:

- **METANOR RESOURCES INC.** began commercial production at the *BARRY PIT* on the BARRY GOLD DEPOSIT property on Waswanipi Traplines in 2008;
- **BREAKWATER RESOURCES LTD.** temporarily suspended operations at the LANGLOIS MINE on Waswanipi Traplines;
- **MSV RESOURCES 2007 INC.** and **CAMPBELL RESOURCES INC.** announced the closure of the COPPER RAND MINE for December 2008 on Ouje-Bougoumou Traplines.

2. OBJECTIVES

2.1. Objectives of CMEB

The objectives of the CMEB (Cree Mineral Exploration Board) are to:

- Provide the Cree the knowledge and the control of the mining activities In Eeyou Istchee,
- Provide information to individual prospectors and Cree junior mining companies,
- Promote industry interest in mining exploration in Eeyou Istchee in the context of economic development,
- Attract mining companies to the Eeyou Istchee territory.

2.2. Objectives of this report

The objectives of this report are to:

- Compile mineral exploration activity in Eeyou Istchee (James Bay) territory from January 2010 (including December 2009) to November 2010,
- Update the activities of mining companies in Eeyou Istchee,
- Update the development of the mining industry in Eeyou Istchee,
- Outline the mineral potential of Eeyou Istchee.

The information in this report is compiled from information made public by mining companies through press releases and on their websites. **NI** indicates that no information was obtained. The CMEB will invite companies and prospectors to submit information on their projects on Eeyou Istchee for the 2011 exploration activity report thereby assisting us in producing a more complete and exact compilation.

The names of the mining companies are in bold, the property/project names are in capital letters and mineralized zones, target areas, showings and deposits are in italics.

For more detailed information, we invite the reader to consult the company websites for their press releases listed in Section 12 of this report.

The 2010 report compiles exploration information as per the nine James Bay Cree Communities in alphabetical order and by Trapline number. The report can be more effectively used as a tool for our readers to identify the holders of active claims in Eeyou Istchee.

3. CREE NATION OF CHISASIBI

3.1. *Geology and mineral resources potential*

To be developed

Chisasibi Traplines:

Number of companies with active claims: 28, including 1 Cree company.

Number of prospectors with active claims: 20 including 2 Cree prospectors.

Substances: gold (Au), silver (Ag), copper (Cu), chromium (Cr), molybdenum (Mo), uranium (U), nickel Ni), zinc (Zn), platinum group elements (PGE).

Highlights:

- Sixteen new sulphide mineral showings with significant values of gold, copper, and silver, in addition to numerous nickel-copper targets on the **PRO OR MINING RESOURCES INC. MENARIK** property.

3.2 Mineral Exploration Activity (Chisasibi)

4. CREE NATION OF EASTMAIN

4.1. *Geology and mineral resources potential*

The Eastmain area is known specially for the greenstone belt containing volcanic and sedimentary rocks suitable for gold, silver and copper mineralization.

The Eastmain area consists of the Lower Eastmain segment and the Middle Eastmain segment of the Lower Eastmain Greenstone Belt. The Lower Eastmain and middle Eastmain segments (as mapped by Moukhsil and Doucet, 1999; Moukhsil, 2000; Moukhsil *et al.*, 2001; Mouskil and Legault, 2002) consist of Archean volcano-sedimentary assemblages grouped into eight formations; the Anatacau-Pivert, Komo, Kaupatauch, Kasak, Wabamisk, Clarkie, Auclair and Natel formations. These rocks are cut by intrusions of monzonitic to monzogranitic and mafic to ultramafic compositions. The rocks are also crosscut by quartz-feldspar and/or feldspar porphyry (dioritic) dykes. ENE-WSW and E-W deformation zones transect the rocks (Mouskil and Legault, 2002). Archean volcano-sedimentary rocks of the Lower Eastmain Greenstone Belt are assigned to the Eastmain Group. This group is composed of komatiitic to rhyolitic volcanic rocks and a variety of sedimentary rocks. Paragneisses of the Auclair Formation (Nemiscau and Opinaca basins) overlie this assemblage.

Several Proterozoic diabase dykes of variable thickness (<30 m), oriented principally NW-SE, N-S, or NE-SW, traverse the area (Houle, 2003). These dykes are massive and magnetic, and locally contain plagioclase phenocrysts and traces of pyrite, and are assigned to the Mistassini (NW-SE), Matachewan (N-S), and Senneterre (NE-SW) dyke swarms based on their orientation and a few age determinations obtained elsewhere in the James Bay region (Houle, 2003).

In the Lower and Middle Eastmain segments, exploration was focused on lode gold or iron formation-hosted gold deposits and porphyry Cu-Au±Ag intrusions.

Eastmain Traplins:

Number of companies with active claims: 32 including 1 Cree company.

Number of prospectors: 14.

Substances: gold (Au), copper (Cu), silver (Ag), zinc (Zn), uranium (U), lithium (Li).

Highlights:

- **LITHIUM ONE INC.** reports NI 43-101 indicated resources at 11.75 million tonnes grading 1.30% Li₂O and inferred resources at 10.47 million tonnes grading 1.20% Li₂O on its JAMES BAY LITHIUM property.

5. CREE NATION OF MISTISSINI

5.1. *Geology and mineral resources potential*

The Archean Upper Eastmain volcano-sedimentary belt, known for its gold, base metal, and PGE potential, continues to attract considerable attention in terms of diamond exploration.

The Otish kimberlite field is located in the NE part of the Opatoca and Opinaca Sub-Provinces, north and west of the Otish Basin. According to Moorhead *et al* (2003) the Beaver Lake pipe (Ditem Explorations Inc.) and the Renard cluster (Ashton Mining of Canada Inc./SOQUEM Inc.) are in the south end of the Mistassini-Lemoyne structural zone (MLZ), which extends from the Mistassini Basin 650 km ENE to the Labrador Trough.

Mistissini West

All of the 2008 exploration projects are in the Frotet-Troilus segment of the Frotet-Evans Volcano-sedimentary Belt (FEVB). The FEVB is located in the centre of the Opatoca Subprovince and consists primarily of tholeiitic and calc-alkaline volcanic formations.

The FEVB is subdivided into 4 lithotectonic segments which are, from west to east:

- The Evans-Ouagama segment
- Storm-Evans segment
- Assinica segment
- Frotet-Troilus segment.

The Frotet-Troilus segment hosts a few massive sulphide deposits, among which the Tortigny deposit (490,000 tonnes at 2.2% Cu, 6.2% Zn, 0.24% Pb, 91 g/t Ag, and 0.3 g/t Au), as well as numerous porphyry Cu-Au-Ag deposits, such as the Troilus Mine held by **INMET Mining Corporation**.

Mistissini North

The Archean Upper Eastmain volcano-sedimentary greenstone belt, known for its gold, base metal, and PGE potential, continues to attract considerable attention in terms of diamond exploration. Diamond exploration projects were largely concentrated in the granitoids and paragneisses that border the Upper Eastmain Greenstone Belt (Otish Mountains area).

Unconformity-type uranium deposits found in the Athabasca Basin account for more than 30% of the global uranium production and 15% of global reserves. The uranium mineralization is epigenetic and occurs near the basal contact of sandstone overlying crystalline basement rocks. Uranium is not confined to the sandstone but may also be concentrated in fractured basement rocks below the unconformity. Mineralization is typically found within 200 m above and below the unconformity surface. The Matoush Uranium Discovery is closely linked to a regional fault that appears to have acted as a conduit for uranium-bearing fluids. The uranium mineralization found at Matoush lies well above the basin rim and resembles perched bodies found above the McArthur River and Cigar Lake uranium deposits in the Athabasca basin.

MISTISSINI TRAPLINES:

Number of companies with active claims: 64.

Number of prospectors with active claims: 43 including 2 Cree prospectors.

Substances: gold (Au), silver (Ag), copper (Cu), lead (Pb), zinc (Zn), molybdenum (Mo), uranium (U), diamond (C), platinum group elements (PGE).

Highlights:

- **STORNOWAY DIAMOND CORP.** and **SOQUEM INC.** have begun a Feasibility Study on the RENARD diamond project on their joint venture FOXTROT property;
- 0.48% U₃O₈ over 4.2m including 1.29% U₃O₈ over 1.2 m on the **STRATECO RESOURCES INC.** MATOUSH uranium property.
- **BEAUFIELD RESOURCES INC.** reports 4.20% Zn, 2.72% Cu, 72.02 g/t Au and 30.1 g/t Ag on the TORTIGNY property.
- 17.4g/t Au over 5m and 24.1g/t Au and 30.1 g/t Ag over 2.5m on the **EASTMAIN RESOURCES INC.** EASTMAIN MINE property.

6. CREE NATION OF NEMASKA

6.1 *Geology and mineral resources potential*

The community of Nemaska is located in the Nemiscau Subprovince of the Superior Structural Province. The Nemiscau Subprovince is bordered on the south by the Opatoca Subprovince and on the north by the La Grande Subprovince. The northern limit of the Nemiscau Subprovince follows the contacts of the Lower Eastmain River Volcanic Belt. All rocks are Archean in age (Hocq, M., 1994).

The Nemiscau Subprovince can be divided into a volcano-plutonic terrain (the Lac Champion Pluton) and a metasedimentary terrain with amphibolites subdivided into three domains (N-1, N-2 and N-3) (Hocq, M., 1994).

Exploration east of the Nemaska area (Mountain Lake Project-Freewest Resources) discovered arsenic-gold geochemical anomalies that appear to be associated with a hydrothermal gold-arsenic (zinc) mineralizing event in a volcanic belt. Nickel and copper showings were discovered in this belt. Exploration programs located showings of layered chromite, copper-nickel and gold. Mapping outlined important zones of metasomatically metamorphosed rocks which contain the minerals anthophyllite, cordierite and sillimanite. The minerals tourmaline and fuchsite as well as the sulphides arsenopyrite, chalcopyrite, sphalerite, pyrite and pyrrhotite were found to occur locally. These mineral occurrences all contain Platinum Group Elements (PGE) which reflects the association of ultramafic occurrences (Atkins, W.M., 1988).

NEMASKA TRAPLINES:

Number of companies with active claims: 15.

Number of prospectors with active claims: 9.

Substances: gold (Au), silver (Ag), copper (Cu), nickel (Ni), uranium (U), platinum group elements (PGE).

Highlights:

- 8.8 million tonnes at 0.88% Cu indicated resources and 7.8 million tonnes at 0.87% Cu inferred resources on the **SOUTHAMPTON VENTURES INC.** HORDEN LAKE property.

7. CREE NATION OF OUJE-BOUGOUMOU

7.1. *Geology and mineral resources potential*

The community of Ouje-Bougoumou is proximal to Chapais and Chibougamau. The Chibougamau area is characterized by 2 mafic-felsic volcanic cycles (the Roy Group) overlain by a sedimentary assemblage (the Opemisca Group). The Roy Group includes mafic intrusions such as the Lac Doré Complex, the Cummings Complex and the Opawica Complex. Multi-phase synvolcanic granitoid intrusions (the Chibougamau Pluton) occur in the core of anticlines (Doucet *et al*, 2003).

Two types of deposits are characteristic of this area: massive sulphide veins with copper and gold mineralization occurring in shear zones and porphyry-type copper-gold mineralization.

OUJE-BOUGOUMOU TRAPLINES:

Number of companies with active claims: 52.

Number of prospectors with active claims: 43 including 1 Cree prospector.

Substances: gold (Au), silver (Ag), copper (Cu), zinc (Zn), nickel (Ni), molybdenum (Mo), uranium (U), and diamond.

Highlights:

- 7.94 g/t Au on the **CARTIER RESOURCES INC.** DOLLIER property;
- **COGITORE RESOURCES INC.** intersected 26.7 metres of massive sulphides grading 2.1% copper, 5.2% zinc, 0.3 g/t Au and 24.9 g/t Ag on its SCOTT LAKE property;
- 6.56 g/t Au on the **TAWSHO MINING INC.** CHEVRIER property.

8. WASKAGANISH FIRST NATION

8.1. Geology and mineral resources potential

The Waskaganish area is located primarily on metasedimentary rocks of the Nemiscau geologic sub-province of the Superior Province. The rocks consist of paragneiss and schist metamorphosed to the amphibolite and granulite facies. Granites, marble and iron formations are associated with the metasedimentary rocks.

WASKAGANISH TRAPLINES:

Number of companies with active claims: 30.

Number of prospectors with active claims: 7.

Substances: gold (Au), silver (Ag), copper (Cu), nickel (Ni), zinc (Zn), uranium (U), diamond (C), lithium (Li), and sphagnum peat moss.

Highlights:

- 30.2 g/t Au on the **ARIANNE RESOURCES INC.** OPINACA property;
- 4.4% Li₂O on the **ARIANNE RESOURCES INC.** KOMO property;
- 2.15% Li₂O on the **DIOS EXPLORATION INC.** PONTAX-LITHIUM property;
- 10.8 g/t Au on the **EASTMAIN RESOURCES INC. – OPINACA MINES LTD.** ELEONORE SOUTH property;
- 22.97 g/t Au on the **VIRGINIA MINES INC.** ANATACAU-WABAMISK property;
- 8.8 million tonnes at 0.88% Cu indicated resources and 7.8 million tonnes at 0.87% Cu inferred resources on the **SOUTHAMPTON VENTURES INC.** HORDEN LAKE property.

9. WASWANUPI FIRST NATION

9.1. *Geology and mineral resources potential*

The Desmaraisville kimberlite field is located in the Waswanipi-Saguenay structural zone (WSZ) oriented WNW at 286° in the central part of the Abitibi Sub-Province and is composed of five hypabyssal pipes (Moorehead *et al*, 1999) and numerous dykes dated at 1100 Ma. The Desmaraisville kimberlites are clustered in two sectors: the Le Tac Township sector hosting 3 pipes and numerous dykes near NE-trending diabase dykes assigned to the Preissac swarm (2167-2214 Ma), and the Ailly Township sector hosting 2 pipes and a few dykes near a major diabase dyke of the Abitibi swarm (1141 Ma) (Doucet *et al*, 2003). The dominant structural control for the Desmaraisville field appears to be the WNW-trending Waswanipi-Saguenay structural zone. According to Doucet et al (2003), NE-oriented faults and diabase dykes form second-order structural controls that determine the emplacement of individual pipes.

WASWANUPI TRAPLINES:

Number of companies with active claims: 83.

Number of prospectors with active claims: 68 including 1 Cree prospector.

Substances: gold (Au), silver (Ag), copper (Cu), nickel (Ni), cobalt (Co), zinc (Zn), iron (Fe), uranium (U), diamond, platinum group elements (PGE), aluminum (Al).

Highlights:

- 5.2 g/t Au on the **HINTERLAND METALS INC.** LOCKOUT property;
- 10.40 g/t Au on the **MURGOR RESOURCES INC.** FANCAMP property;
- 28.06 g/t Au on the **MURGOR RESOURCES INC.** NELLIGAN property;
- 10.3 g/t Au, 2.62% Cu, 14 g/t Ag on the **NORTHERN SUPERIOR RESOURCES INC. – MATAMEC EXPLORATION INC.** WACHIGABAU property.
- **METANOR RESOURCES INC.** poured record 747 oz. and 744 oz. gold bars at its Bachelor Lake Mill. The ore comes from the very promising **BARRY OPEN-PIT GOLD MINE.**

10. CREE NATION OF WEMINDJI

10.1. *Geology and mineral resources potential*

The Wemindji area is known especially for the numerous granitic rocks produced by crustal thickening and fracturing resulting in conditions favourable to the intrusion of kimberlite. Locally, volcanic rocks are squeezed between tonalite and granites.

Wemindji is located in the La Grande Subprovince. According to Houle (2003), the La Grande Volcano-sedimentary Belt (LGVB) included in the La Grande Subprovince, hosts the vast majority of reported showings. The LGVB runs parallel to the Wemindji-Caniapiscau structural corridor (WCZ) and is composed mainly of mafic to felsic volcanic rocks, interstratified with metasediments and oxide-facies or magnetite iron formations. Komatiitic flows and ultramafic intrusions are also scattered throughout the area and locally host Ni-Cu±PGE and Cr occurrences. In the LGVB, exploration has focused on the search for deposits associated with gold-bearing iron formations, volcanogenic alteration zones (Cu-Zn-Ag-Au), quartz-sulphide veins (Cu-Zn-Au±Ag), and magmatic chrome and platinum group element mineralization (Houle, 2003).

The search for diamond-bearing kimberlites and lamprophyre dykes continues. The Wemindji kimberlite field consists of shallow dipping sills that intrude the Archean gneisses of the La Grande Sub-Province (Moorehead *et al.*, 2003). It is located near the eastern shore of James Bay, at the western end of the Wemindji-Caniapiscau structural zone (WCZ) extending 650 km ENE from James Bay to the Caniapiscau Reservoir. The WCZ contains small graben type basins infilled by 2.2 Ga siliciclastic sediments of the Sakami Formation and several Archean nepheline syenite intrusions. According to Moorehead, the kimberlite sills are located at the intersection of the WCZ with the NE extension of the Kapuskasing structural zone. The basement rocks belong to the Archean Superior craton with tonalites dated at 2.8 Ga.

Wemindji Traplines:

Number of companies with active claims: 41 including 1 Cree company.

Number of prospectors with active claims: 27 including 1 Cree prospector.

Substances: gold (Au), copper (Cu), diamond (C), uranium (U), iron (Fe), nickel (Ni).

Highlights:

- Environmental Scoping Study on the **AUGYVA MINING RESOURCES – CANADIAN CENTURY IRON ORE CORP.** joint venture DUNCAN property;

- 5.0 g/t Au on the **BEAUFIELD RESOURCES INC.** OPINACA property;
- 0.058% U_3O_8 on the **DIOS UGO** property;
- 0.617% U_3O_8 on the **DIOS OPINACA NORD** property;
- 52 g/t Au and 20.98 g/t Au on the **VIRGINIA MINES INC.** POSTE LEMOYNE property.

11. WHAPMAGOOSTUI FIRST NATION

11.1. *Geology and mineral resources potential*

The community of Whapmagoostui is located in the Bienville Subprovince, a plutonic assemblage occupying the southern part of the northern Superior province. It is composed mainly of migmatized orthogenesis ranging from tonalitic to granodioritic in composition, with enclaves of supracrustal (iron formation, paragneiss, metavolcanic rock) and plutonic (ultramafic) rocks intruded by synkinematic granodioritic to tonalitic plutons and by late biotite granites (Perreault and Moorehead, 2003). This subprovince also contains volcano-sedimentary belts, such as the Lac Fagnant Belt, metamorphosed to the amphibolite facies (Perreault and Moorehead, 2003).

The Cree Mineral Exploration Board conducted mapping activities in the Whapmagoostui region in 2004-2005.

WHAPMAGOOSTUI TRAPLINES:

Number of companies with active claims: 9.

Number of prospectors with active claims: 3.

Substances: gold (Au), copper (Cu), nickel (Ni), iron (Fe), uranium (U).

Highlights:

- 40% Cu and 0.67% U_3O_8 on the **AZIMUT EXPLORATION INC. – ABITEX RESOURCES INC.** SOUTH BIENVILLE property;
- $\geq 0.008\%$ U_3O_8 in 45 of 58 drill holes on the **BONAVENTURE ENTERPRISES INC.** K9 URANIUM CORRIDOR property.

ANNEX 1. ABBREVIATIONS USED IN THIS REPORT

The following is a legend of the abbreviations used in this report.

Prospecting and geological surveys

B	Bulk sampling
D(#h:m)	Diamond drilling (number of holes : total meters drilled)
G	Geological mapping
Min	Mineralogical studies
Pg	Unspecified prospecting and geological study
Pr	Prospection
Drc(#h:m)	Reversed circulation drilling (number of holes:total meters)
Rsi	Remote sensing interpretation
S	Sampling
Sch	Channel sampling
T	Trenching and stripping
LC	Line cutting

Geochemical surveys

Gc	Unspecified geochemical surveys
G(b)	Boulder geochemistry
Gc(e)	Esker geochemical survey
Gc(h)	Humus geochemical survey
Gc(lb)	Lake bottom sediment geochemical survey
Gc(r)	Lithochemical survey (rock)
Gc(s)	Stream sediments geochemical survey
Gc(sl)	Soils geochemical survey
Gc(t)	Till geochemical survey

Geophysical surveys

AGp	Unspecified airborne geophysical survey
DPEM	Drill hole pulse electromagnetic survey (borehole)
Gp	Unspecified ground geophysics
EM	Electromagnetic survey
IP	Induced polarization survey
Mag	Magnetic survey
Mag-EM(A)	Airborne magnetic and electromagnetic survey
VTEM(A)	Airborne VTEM survey
MEGATEM	Airborne MEGATEM survey
PP	Pulse polarization survey
Rd	Radiometric survey
Sc	Scintillometric survey

Other types of studies/work

Met	Metallurgical studies
TE	Technical evaluation
RE	Resource estimate
DMS	Dense media separation

Other information

Acq	Acquired property
JV	Joint venture
Ma	Millions of years before the present
PFS	Pre-Feasibility Study
PEA	Preliminary Economic Assessment
Ga	Billions of years before the present
KIM	Kimberlite Indicator Minerals
ppb	Part per billion
ppm	Part per million
cpht	Carats per hundred tonne
g/t	Grams per tonne
ACF	Active Channel Facies
CBF	Channel Bar Facies
tpd	Tonnes per day
QFP	Quartz-feldspar-porphyry
eU	Equivalent uranium
cps	Counts per second
