

# Nimsken Corporation Inc.

## Parameters

**Address :** 203 Opemisca Meskino, Oudje-Bougoumou (Qc) G0W 3C0

**Projects Location :** Québec - Eeyou Istchee (James Bay)

**Activity:** Nimsken Corp. is junior company for services and exploration. It been built in 2003 by he Cree Nation of Oudje-Bougoumou. Its activities focus on the exploration of properties with potential for eventual commercial exploitation. Nimsken has put forward efforts to focus its research on the Nord-du-Québec and to explore for Basic metals and gold. The Company has interests in several projects in different environment in the Eeyou Istchee. The collaboration with SOQEM on Michwacho and Cummings projects were successful. Nimsken Corp. Still have other joint venture project with SOQUEM up-to-date. Nimsken Corp. invests in developing the mineral potential of the area of 32J/02 and 03, 32G/10. A total of 500 000 \$ has been spend on this area. The project in this latest area concerns mostly Beep Mats investigation for conductors.

**Collaborator and Partnership:** EX-IN geophysics And SOQUEM

**Properties value :** Evaluation in process

**Owner :** Cree Nation Of Oudje-Bougoumou

**Financial structure :** Caisse Populaire Desjardins Mistissini Lake Service Center In Ouje-Bougoumou

**Board:** Band of Oudje-Bougoumou

**President:**

Madam Louise Wapachee

## Projects and Funds

### 1. financial

CMEB and The Cree Nation of Oudje-Bougoumou are the principal fund at 50%. Nimsken Corp. plans to invest 500 K\$ on its properties located in Eeyou Istchee in the area of Chibougamau on the 32G and 32J.

## 2. Projects Details

Nimsken Corporation, under the direction of Sam R. Bossum, proposes to prospect SRNC 32J 05, 11, 12 and 32G 02, 03, 06, 07. The nominal area of each project covers up to 3000 square Km. The actual area which will be prospected will be much less than 1% of the area, not only because part the area is staked but also as the prospecting with Beep Mats will be limited to:

1. Airborne EM conductors which occur in areas of shallow overburden
2. Around surface showings discovered in the past by prospectors. If a showing was discovered in the past, it is an absolute proof that sub-outcrops occur in the neighbourhood, thus the area becomes a prime target for Beep Mat crews. Prospectors, especially in BC used often Beep Mats to discover new showings on their claims and thus getting mining companies to option repeatedly their properties.
3. Around any significant assays intersected in any past DDH, if the overburden maps of the area near the DDH suggest presence of shallow overburden.
4. To begin the crews will prospect targets in un-staked areas, but we suggest that Nimsken offers to option for a short period the claims of any company who detains valuable targets, without making any initial down payment. If we do not extend the option, we will submit them a professional report of the works on their claims, our surveys, so the owners of the claims will benefit by earning statutory credits which would allow them to keep their claims for a longer period.
